

GenBI Football Match Analyst

A Generative BI (text-to-SQL) project that lets you ask questions on over 38,000 football matches and get answers with SQL queries, powered by Gemma 4 and the Agno agent framework.

1. Select or type a league to analyse

England Premier League

2. Ask a football data question

Most liked game and why

Run analysis

Done.

Top scoring teams

Best game or team

Team with most goals per game

Most carded game or team

show average corners,goals,attacks per game in month of august and sept

How should I approach this

The user is asking for the "most liked game". Since there is no explicit "likes" column in the database, I need to interpret "most liked" as the most exciting game. Usually, high-scoring games are considered the most exciting.

Looking at the query results:

- The game between Fulham and Man City had the most goals: 9 goals (4-5).
- Other high-scoring games included Man Utd vs Bournemouth (8 goals).

I will identify the Fulham vs Man City match as the most "liked" (exciting) due to the highest goal count.

Created by Sid Raghunathan

SQL used:

```
```sql
SELECT
 Home,
 Away,
 Score,
 (CAST(split_part(split_part(Score, '(', 1), ' - ', 1) AS INTEGER) +
 CAST(split_part(split_part(Score, '(', 1), ' - ', 2) AS INTEGER)) AS TotalGoals
FROM matches
WHERE League = 'England Premier League'
ORDER BY TotalGoals DESC
LIMIT 1;
```
```

Thinking

[user] Most liked game and why

IMPORTANT: You MUST filter every SQL query with WHERE League = 'England Premier League'. Do not query any other league.
